tissue where the formation of new blood vessels is desired, and so inducing neovascularisation in the area of the tissue; (2) promoting angiogenesis in an area of the subject where angiogenesis is a desired, comprising introducing a CpG oligonucleotide to the area, and so promoting angiogenesis in the subject; and (3) screening for an agent that inhibits neovascularisation, comprising administering a CpG oligonucleotide to a non-human mammal and administering the agent to the mammal, where inhibition of angiogenesis in the animal indicates that the agent is effective in inhibiting neovascularisation. The CpG oligonucleotides have vulnerary, vasotropic and antiarteriosclerotic activities, and can be used in gene therapy. The method and the CpG oligonucleotides can be used in inducing angiogenesis or incovascularisation, such as in subjects who have a wound or who have exhibit male pattern baldness, or subjects who have a wound or who have the resents that inhibit neovascularisation. The present sequence the control in the exemplification of

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing

```
ö
the expression profile or expression pattern of a gene derived from Corymeform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Corymeform bacterium coryneform bacterium of the producing amino acids, nucleic acids, vitamins, accharides and organic acids, particularly L-1ysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NET; mouse; gene; ds; ERP; SAP-1; angiogenesis; transgenic; ulcer; ischaemia; wound healing; vascular restenosis; hypertension; dementia; alzheimer's disease; lymphoedema; atheroselerosis; haemangioma; bone; haemangioendothelioma; ovarian hyperstimulation; endometriosis; ascites; follicular cyst; Kaposi sarcoma; tumour; cancer; allergy; synovitis; respiratory distress; rheumatoid arthritis; pneumonia; thyroiditis; cartilage dysfunction; obesity; sthma; inflammation; hepatitis; glomerulonephritis; diabetic retinopathy; thyroiditis; nasal polyp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to the use of all or part of a NET (also known as ERP or SAP-1) polypeptide to identify compounds modulating angiogenesis or compounds that can be used to prevent or treat pathologies associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of all or part of a NET polypeptide to identify compounds useful to modulate angiogenesis and prevent or treat pathologies associated with angiogenic disorders e.g. cardiac ischemia, atherosclerosis or tumor
                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                            ;

with angiogenic disorders. The invention also comprises transgenic animals that bear mutations in the NET gene. The method and transgenic animals of the invention are useful to identify compounds to treat pathologies associated with angiogenic disorders involving insufficient vascularisation and requiring increased angiogenesis (e.g. cardiac/pertension, ulcers, alzheimer's disease, lymphocedema, dementia) or involving increased vascularisation and requiring decreased angiogenesis (e.g. atherososis, haemangioma, haemangiocendorhelloma, ovarian hyperstimulation, endometriosis, ascites, follicular cysts, ). They are also useful to identify compounds useful to treat pathologies associated with angiogenic disorders such as Kaposi sarcoma, tumour growth and cancer, or other pathologies in which NET is activated). Such compounds may also be used to treat allergies, dysfunctional uterine bleeding, respiratory distress, rheumarcoid arthritis, bone and cartilage dysfunction, obesity, synovitis, inflammation, hepatitis, pneumonia, nasal polymelectides downregulating or blocking expression of a NET gene, intracellular binding proteins or NET dominant negative mutants. Compounds modulating NET activity may also be included in medicaments to prevent and/or treat pathologies associated with anglogenic disorders. The present sequence represents the DNA encoding the mouse NET protein is lowered in the method of the invention, the gene encoding this protein is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, da, gene, pain, neuronal tissue, gene therapy,

The invertion discloses a composition to the mucleic acid sequence actor the invertion discloses a composition of the mucleic acid sequence. Also claimed are a vector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and an expression of the polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polypeptides given in the cutvity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the compound a pharmaceutical composition compound useful in treating pain and a pharmaceutical composition compound useful in the compound that in a sectivity is useful for preparing a medicament for treating pain and apared nerve injury (SNI) in an animal (e.g. spinal segmental nerve injury (SNI) in an animal (e.g. spene therapy). The sequence presented is a human DNA (shown in Table 2 of the compound of this patent did not form part of the polypeptides of the invention contribution of the polymed and specification) which encodes one of the polymed specification, but was contained in electronic form flates from which is electronic form flates from the patent did not form part of the painted specification, but we contain the patent did not form part of the painted specification, the sequence for this patent did not form the patent did not form the patent did not form the pate

corrections a composition computation which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also calidated are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying an audient for identifying an agent that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polypeptides given in the apprince of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of the polypeptides given in the specification, an estimated in erreating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (Ctung), The sequence presented is a human DNA (shown in Table 2 of the specification) which encodes one of the polypeptides of the invention which single pain. Note: The sequence data continued in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at the specification, the polypeptides.
                                                                                     New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                    The invention discloses a composition comprising two or more isolated

The present invention provides a number of nucleotide and protein are queences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, saccharides and organic acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene.
                                                                                                                                             Novel polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CpG oligodeoxynucleotide; unmethylated; antigen-presenting cell; immunogenic; cytokine release; natural killer cell; NK cell activation; cell-mediated immune response; T-cell response; humoral response; B-cell response; antibody production; immune response induction; vaccine allergy; asthma; infection; bacterial; viral; fungal; protozoal; parasitic; tuberculosis; AIDS; autoimmune disease; lupus erythematosus; rheumatoid arthritis; multiple sclerosis; solid tumour; cancer; immune deficiency; biological warfare agent; cytostatic; antiarthritic; antimicrobial; antiallergic; protozoacide; tuberculostatic; antiarthritic; antiasthmatic; dermatological; phosphorothioate; ss.

The invention relates to novel immunogenic CpG oligodeoxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNY-OpG-WNNN-3' or 5'-RXY-CpG-RXY or 2'. The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cellmediated (T-cell) response or a humoral (B-cell, antibody) response, with oligonucleotides of the sequence 5'-RX-CpG-RX'3' being able to induce a cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNN-3' being able to induce a humoral response. It is thought that after administration, the oligonucleotide acts on antigen-presenting cells (e.g., macrophages and dendritic cells), which then release cytokines, can able to induce a new relation of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of T- or B-cells. The induction of an immune response is useful for treating, preventing or ameliorating an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or anti-infections and the infections which may be treated include viral, bacterial, fungal and protozoal infections such as tuberculosis, Albs, cleahing and schiscomiasis. Immune response induction may also be conditions, and the infections which may be treated include viral, cased in the treatment of an autoimmune response induction may also be cused in the treatment of an autoimmune disorder (e.g., lupus exprements of bacterial, immune system delicated with immune system delicated with immune system delicated an autoimmune delicated an autoimmune delicated a
                                                                                                                Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     exposure to an agent of biological warfare. An immunogenic CpG oligonuclectide, either alone or in combination with an anti-cancer agent, is useful for treating solid tumour cancer. The induction of an immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonuclectide is preferably administered to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic

(first entry) 26-SEP-2001 Immunoreactive CpG sequence-containing oligonucleotide #7.

CpG sequence; immune response; non-B cell activation; interferon gamma; IFN-gamma; humoral; antibody production; interleukin-6 production; therapeutic; allergy; asthma; cancer; autoimmune disorder; infection; bio-warfare; vaccine; antisense therapy; eczema; allergic rhinitis;

```
AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences. The converse is different from another of the multiple CpG sequences. The converse is different from another of the multiple CpG sequences. The converse is different from an immune response involving a cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma. Cc treating, preventing or ameliorating an allergic reaction, e.g. asthma. Cc treating, preventing from exposure to bio-warfare agent in a human. The system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is induction of immune response improves the efficacy of a vaccine and is an antisense therapy. The ODN are useful for treating or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines cand other atopic conditions, for improving the efficacy of vaccines cand other atopic conditions, for improving the efficacy of vaccines cand other atopic conditions, for improving the efficacy of vaccines cand other atopic conditions, for improving the efficacy of vaccines cand other atopic conditions, for improving the efficacy of third immunoseficiancy syntus (HIV) and malaria, for treating immune system deficiencies, e.g. lupus cultiple sclerosis, infections including Francisella schhartis and multiple sclerosis, infections including Francisella, e.g. lubus the converse of bio-warfare agent, including Ebola, and when a sequence of bio-warfare agent, including Ebola, and when a sequence of bio-warfare agent, including especial converse of bio-warfare agent, including especia

comprises at least one oligonout control and an annual comprises at least one oligonout control and an annual comprises at least one oligonout control and an annual respons or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or amaliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to an immunostimulatory composition, which

The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumnours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Boola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                        1..16

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant treating diseases, including pathogenic infection, (non-)malignant colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of

The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory syncytial virus (RSV), the primary cause of viral bronchiolitis and pneumonia in infants and children, and infectious pulmonary disease in infants. RSV has been particularly implicated in death of infants that are premature, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sterically stabilised cationic liposome; SSCL; ODN; oligodeoxynucleotide; tuberculosis; cytokine; leishmaniasis; AIDS-associated Kaposi's tumour; thyroid; cancer; allergy; eczema; allergic rhinitis; coryza; hay fever; schlstosomiasis; interferon gamma; lupue erythematosus; antimicrobial; asthma; urticaria; autoimmune disease; diabetes; rheumatoid arthritis; CpG motif; interleukin-13; cytostatic; tularemia; malaria; psoriasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vaccine for immunizing patient against respiratory syncytial virus, has epitopes of Paramyxoviridae P protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxynucleotides.

The present invention describes a method for inducing the production of vascular endothelial growth factor (VEGF) by a cell comprising contacting the call with a CpG oligonucleotide and therefore inducing the production of VEGF by the cell. Also described: (1) inducing neovascularisation in a tissue, comprising introducing a CpG oligonucleotide into an area of the tissue, (2) promoting conducing neovascularisation in the area of the tissue; (2) promoting angiogenesis in an area of the subject where angiogenesis is desired, and so comprising introducing a CpG oligonucleotide to the area, and so comprising introducing a CpG oligonucleotide to the area, and so comprising introducing a CpG oligonucleotide to a non-human mammal and administering a CpG oligonucleotide to a non-human mammal and administering the agent to the mammal, where inhibition of angiogenesis in the enimal indicates that the cpG oligonucleotides have vulnerary, vasotropic and antiarteriosclerotic agent is effective in inhibiting neovascularisation. The CpG oligonucleotides can be used in gene therapy. The method and the CpG oligonucleotides can be used in inducing angiogenesis or neovascularisation, such as in subjects with a skin graft, subjects who continue male pattern baldness, or subjects with a skin graft, subjects who cathoring male pattern baldness, or subjects with a skin graft, subjects who cathoring male pattern baldness, or subjects who have a wound or who have a cathoring and anternal and and an enthod may also be used in screening for agents that inhibit neovascularisation. The present sequence correspondent in the exemplification of the partern because it is used in the exemplification of
                                                                                                                           Inducing the production of vascular endothelial growth factor by a cell, useful for inducing angiogenesis, comprises contacting the cell with a CpG oligodeoxynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     90.0%; Score 14.4; DB 10; Length 16; 93.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to sterically stabilised cationic liposomes (SSCL) which comprises a cationic lipid, a co-lipid, stabilising agent and encapsulating a K type oligodeoxymuclecide (ODN) including a CpG motif. The invention is useful in pharmaceutical composition for impairing an invention is useful in pharmaceutical composition for impairing or further in subject in a subject; for stimulating an immune response, which is expression of a cytokine (e.g. interferon gamma), particularly immunotherapeutic response against tumours or stimulating an in vivo or immunotherapeutic response against tumours or stimulating an in vivo or infectious agent e.g. virus, bacteria and fungus. It is also useful for delivering oligodeoxymucleotides including a CpG motif in clinical applications; for treating infectious diseases (e.g. tularemia, malaria, francisella, schistosomiasis, tuberculosis and leishmaniasis), cancer (e.g. solid tumours, AIDS-associated Kaposi's tumour, thyroid cancer etc), allergy (e.g. eczema, allergic rhinitis or coryza, hay fever, bronchial or allergic asthma, urticaria, food allergies), autoimmune conseases (e.g. diabetes, rheumatoid arthritis, lupus erythematosus and multiple sclerosis) and psoriasis. The present sequence is a K class CpG ODN potentially useful for encapsulating in SSCL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                              Cationic liposome composition for delivering oligodeoxynucleotides including a CpG motif in clinical applications, comprises a cationic lipid, a co-lipid, stabilizing agent and an encapsulated oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to novel immunogenic CpG oligodecoxynucleotides (CAGG05812-C8073). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5.NNNT-CpG-WNNN-3' or 5.-RY-CpG-RY 3'. The central CpG motif is unmethylated, and the oligonucleotides of the oligonucleotide and recentral cpg motif is unmethylated, and the oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce a threat a cell-mediated response, and those of the sequence 5'-RY-CpG-RY-3' being able to induce a humoral lesponse. It is thought that after a cell-mediated response or a humoral lesponse, it is thought that after administration, the oligonucleotide acts on antigen-presenting cells administration, the oligonucleotide acts on antigen-presenting cells candinistration, the oligonucleotide acts on antigen-presenting cells (e.g., macrophages and dendritic cells) which then release cytokines, leading to activation of natural killer (MX) cells. A cell-mediated or humoral response can then occur by activation of T- or B-cells. The candinistration of natural killer (MX) cells. A cell-mediated or humoral response is useful for treating, preventing or amplication of natural killer (MX) cells. A cell mediated or where an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergatic agent or anti-infections and the infections which may be treated include erzema, allergic conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include erzema, allergic conditions which may be treated include sections and the infections which may be administed to a described Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent. lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CPG oligodeoxynucleotide of the invention Claim 4; Page 26; 46pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /clone_lib=_Soares NhHMPu S1"
/note="Organ: mixed (see below); Vector: pT7T3D-Pac
(Pharmacia) with a modified polylinker; Site.]: Not I;
Site 2: Eco RI; Equal amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHM, pregnant uterus
NbHPU, and fettal heart NbHH19W) were mixed, and ss circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260232-265223,
340488-345479, and 484488-489479."

transgenic cell line was obtained by transformation with the T-DNA
of ppCV6NFHyg Agrobacterium binary vector; the left border junction
of T-DNA insertion 3322e1 was isolated in B. coli after EcoRI
digestion and self-circularization of plant DNA; clone 3322e1
carries a plant DNA fragment of 6.4 kb that extends from an EcoRI
site to the left-border junction of pPCV6NFHyg T-DNA tag; sequences
of the left T-DNA border are excluded from the submission

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 8, Application US/09286098

Sequence 8, Application US/09286098

Patent No. 6218371

GENERAL INFORMATION:

APPLICANT: Weiner, George

TITLE OF INVENTION: Immune System Using Immunotherapeutic Oligonucleotides and
TITLE OF INVENTION: Lord No. 1026/HCL

TITLE OF INVENTION: Cytokines

TITLE OF INVENTION: Cytokines

TITLE OF INVENTION: US (909.286, 098

CURRENT FILING DATE: 1999-04-02

EARLIER FILING DATE: 1998-04-03

NUMBER OF SEQ ID NOS: 105

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 8

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                GENERAL INFORMATION:
